CHAPTER: 6

IMPORTANCE OF SECONDARY EDUCATION IN SOCIETY FOR STUDENTS

Sangita Das

❖ ABSTRACT:

An educated society may consider everyone's requirements while working towards progress, including the needs of its young people, secondary students, seniors, and children. The younger generation, younger students are nurtured much better in an educated society than in an uneducated one, and as a result, they grow up to be content and joyful secondary students who contribute to the development of the country. On the other hand, an illiterate society offers more advantages than disadvantages. A civilization made up of illiterate and uneducated people is unable to provide for itself and lacks the vision to do so. Secondary students in such communities don't strive for or see improvement; instead, they live deprived and generally sad lives. Bad education, which is the basis of all their problems, contributes to the bad status of these cultures' economies, cleanliness, and health. These cultures are unable to give people and secondary students the essential education, which drives them towards criminal activity in order to support themselves and their families. The fate of the civilization is sealed when the kids are hungry, neglected, and made to work.

❖ KEYWORDS:

Secondary Education, Society, Communities, Culture, Civilization, Economic.

❖ INTRODUCTION:

An educated society is either developed or is moving towards development. It moves steadily towards economic, social and infrastructural development; providing all of its members, the financial, social and infrastructural needs. Because its secondary education are educated, they are employed and fearless to adapting to any scientific and technological advancement. They have a vision of development and high levels of per capita income, leading to better living standards and quality of life. An uneducated society on the other hand is underdeveloped and its per capita income is extremely low, which reflects poor living conditions and hence poor state of basic amenities. The average income earned by the individuals is low due to their low productivity, owing to their illiteracy. An educated community can meet its members' demands on a collective basis, producing contented and happy people who, in turn, create a contented and happy society. An educated society has workers who are able to support their families and themselves through profitable employment. They don't have to, and they don't have to break the law to take care of their needs either. Both the individuals and the society maintain order.

On the other side, an illiterate society produces dissatisfied and unsatisfied secondary level students who are only capable of wreaking section. In order to provide for his or her family's daily needs of food and money, an illiterate person is more prone to engage in illegal actions like stealing, robbery, etc.; this ultimately contributes to the society's poor law and order situation. However, it is also true that approximately three-quarters of criminals are uneducated. This does not imply that every ignorant individual is a criminal. A wealthy society that meets the social and economical demands of its citizens is an educated society. The group's members are wealthy enough to meet their necessities and are gainfully employed in business or their professions, leading happy and comfortable lives.

ABSTRACT:

The purpose of this study is to explain the benefits of using yoga in education through the presentation of research findings. Yoga uses a variety of strategies to achieve psychosocial equilibrium. We are seeing an increase in stress and emotional illnesses in children; youngsters are becoming more sedentary and obsessed with the plethora of stimuli that bombard them on a continual basis via mobile phone, computer, and television. We can conclude that yoga has proven to be effective in treating a number of ailments and disorders by studying a series of research era. Yoga can help relieve stress, anxiety, and depression symptoms. It investigates the feasibility of incorporating yoga into the school curriculum for both healthy and disabled youngsters. So far, the findings indicate that yoga in classrooms could help with focus, self-regulation, and tension reduction.

KEYWORDS: *Yoga education, Psychosocial, Disorder, social media, School children.*

Introduction:

In today's environment, education is becoming increasingly difficult. Children come to schools where the most common method is listening and transcribing from the blackboard while
